

**FOR IMMEDIATE RELEASE**

## **Chesapeake Technology Offers Complete Single Beam Solution in SonarWiz 7**

**Mountain View, CA (November 2017)**

Chesapeake Technology, Inc (CTI) is pleased to announce the availability of single beam acquisition and post processing capabilities in conjunction with flexible licensing options for the SonarWiz 7 product line. The new modules share the same easy to use interface and powerful feature set that are familiar to existing customers. The modules provide support for a wide variety of NMEA-0183 compliant single beam echo sounders (SBES). Import file types include HYPACK (ISA50-M39), MLG EASYNAV, and TXT.

SBES data acquisition and post-processing is available as a standalone package for \$3,995. The SBES post-processing only retails for \$1,995. Existing SonarWiz licensees, may add SBES post-processing for only \$995. All SonarWiz data acquisition licenses can now get SBES acquisition at no additional cost. Prices are competitive with standalone packages and provide far more integration and professional features than most:

SBES data acquisition and post-processing	\$3995
SBES post-processing only	\$1995
Add SBES to SonarWiz license	\$ 995

CTI is continuously adding support for module types, sonar and sensor types and file formats. The Single Beam modules provide another low-cost upgrade path to multiple sonar types in one easy to use, well integrated package.

**Chesapeake Technology, Inc.** is a privately held company based in Mountain View CA. SonarWiz software is used by hundreds of clients worldwide, including NOAA, USGS, Fugro, Oceaneering, leading academic institutions, and many of the world's navies.
